

DEEP-FREEZE LOGISTICS

- Comprehensive services for fast moving products
- Swift access to the metropolitan region
- Flexible picking and packing with online inventory management
- Combined with processing service

In the center of the fishing harbour area, the Fischmarkt Hamburg-Altona GmbH operates a deep-freeze storage with several hundred pallet spaces. They are stored ideally for sensitive, fast-moving products. The qualified and experienced team offers both flexible and individual solutions as well as reliable service.

Efficient high-bay fork-lift drives ensure swift access to entire pallets as well as individual boxes required for picking and packing. Thanks to customised software, all processes – such as storage, inventory checks, picking and dispatch – are completed swiftly. Password-protected interfaces provide customers with online access to the Internet information box so that they can obtain updated information at any time of the day and all around the world on their accounts, inventories and transactions.

The deep-freeze warehouse offers good access by road: It is close to the A7 motorway, while the port of Hamburg is just outside the front door. At the same time, the vicinity of the central business district allows short delivery times within Hamburg.

By linking the deep-freeze storage with our processing plant certified in accordance with IFS, MSC, ASC and BIO we offer our customers also synergies from a single source.
